/note="Vector: pAD-GAL4; At 20-25% parasitemia, blood was collected from BAIB/CByJ mice infected with Py17XL collected from BAIB/CByJ mice infected with Py17XL parasites, and leukocytes removed by passage over microcrystalline cellulose collumns. Total RNA was isolated using the guanidnium isothicyanate method, and mRNA isolated using oligo(dT)-cellulose chromatography. First strand cDNA synthesis was completed using a 50-base primer and reverse transcriptase in the presence of 5-methyl dCTP. After second strand synthesis, uneven termini were treated with Pfu DNA polymerase and EcoRI adaptors ligated to the blunt ends. The sample was cleaved with XhoI and separated on a Sephacryl S-500 column. Size-fractionated cDNA was precipitated and ligated to HybriZAP arms directionally using EcoRI-XhoI cleaved arms. After packaging, the phagemid vector (pAD-GAL4) was excised from the HybriZAP vector and plasmid DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            isolated."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunospecific for Saratin, and methods for identifying Saratin agonists or antagonists. Saratin is useful for treating thromboembolic processes, and for manufacturing a medicament for treating thromboembolic diseases. It is useful for preventing thrombotic diseases. Saratin is also useful for coating artificial surfaces, since use of Saratin renders them non-adhesive for cells and prevents the activation of cells. It may also be used for coating natural collagen surfaces Furthermore, Saratin is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  platelet adhesion. The invention includes polynucleotide sequences encoding Saratin, an expression vector comprising the DNA sequence, host cell transformed with the expression vector, antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Saratin polypeptide and gene isolated from Hirudo medicinalis for blocking platelet adhesion, especially useful for treating or preventing thrombotic diseases, or for manufacturing a medicament for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful for modifying intraocular lenses in order to lessen the thrombogenecity of the lens material, for contacting the lens material for covalent crosslinking to modify the lens material. The lens material is used for refractive anterior or posterior chamber ocular implants, which may be implanted into the eye. This new type of coating avoids problems contributed by stimulated cell growth. In combination with other medicaments that are for instance conferring cell death, Saratin coating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 7; Page 41; 46pp; English.

LAPP blocks stimulation of platelet aggregation by collagen, at an antithrombotic concentration of about 100 nMolar (or 1.6 ug/ml). Platelet aggregation is stimulated by 2 ug/ml collagen and addition of LAPP inhibits this with an IC50 of 45nM, but this may be overcome by the addition of 0.25 mM arachidonic acid. LAPP could be used for treatment and prevention of thrombotic LAPP could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapp could be used for treatment and prevention of thrombotic lapper could be used for treatment and prevention of thrombotic lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of thrombotic lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for treatment and prevention of the lapper could be used for the lapper could be used for the lapper could be used for the lapper could be used to the lapper coul
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   When cloned into the yeast expression vector pKH4a2, the LAPP gene sequence forms a fusion product of MAF-alpha-1 leader sequence plus mature LAPP, which when produced are proteolytically processed the Lys-Arg cleaving endopeptidase (KEX2), which cleaves on the claiminal side of Lys-Arg, and the products secreted into the culture of the control of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW68010 standard; Protein;

FKBP46 is a novel insect cell nuclear immunophilin, which can be used to study and identify additional immunosuppressive drugs that bind to it. Such immunosuppressive agents can be used in treating transplant and tissue graft patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated immunophilin FKBP46 nucleic acids - useful for developing products for the study and identification of immunosuppressive agents for treating e.g. transplant and tissue graft patients

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL18176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a mouse ICe-4 protein sequence. The present sequence was used in a sequence homology comparison with the protein sequences of human ICe-ced 3 homology (ICh-1) (AAB14253), murine interleukin-lbeta converting enzyme (mICE) (AAB14249), murine ICE2 (AAB14252) and C. elegans ced-3 (AAB14246). The coding sequence of the present sequence is a member of a family of genes involved in programmed cell death (apoptosis). ICh-1 may play an important role in both the positive and negative regulation of apoptosis. The ICh gene may be used in gene therapy in disorders characterised by cell death e.g. neural and muscular degenerative diseases, myocardial infarcation, stroke, virally induced cell death and diseases, myocardial infarcation, stroke, virally

This sequence represents a cDNA encoding murine caspase-12L, a splice carriant of caspase-12. Caspases are a family of proteins involved in the regulation of apoptosis and are synthesised as proforms which are activated via cleavage after specific Asp residues. Mammalian cells carpases several caspases, and it is thought that these act in a complete protein carried to cause programmed cell death. Nucleic acids canding caspase-12s (AAZ32644) or truncated forms of caspase-12L (AAZ32667) are used for production, recombinantly or in vivo, compared to the caspase-12 polypeptides which induce programmed cell death. This is compared to the caspase-12 polypeptides which induce programmed cell death. This is compared to the caspase-12 polypeptides which induce programmed cell death. This is compared to the caspase-12 polypeptides which induce programmed cell death. This is compared to the caspase-12 polypeptides which induce programmed cell death. This is compared to the caspase-12 polypeptides which induce programmed cell death to cappase-12 polypeptides which induce programmed cell death to compare the caspase-12 polypeptides which induce programmed cell death. This is compared to the caspase-12 polypeptides which induce programmed cell death to cappase-12 polypeptides which induce programmed cell death to cappase-12 polypeptides (for example, to determine gene expression and to core expression libraries) or as molecular weight markers. Fragments core cappase-12 gene (and its allelic variants); in fluorescent in situation of the caspase-12 gene, and for characteriants are cappase-12 gene, and for core cappase-12 gene, and core cappase-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                  ced-3; virally induced cell death; apoptosis; gene therapy; neu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
The present invention is concerned with methods for identifying compounds useful for modulating caspase-mediated apoptosis. These include the caspase-12 protein shown here. These agents can be used in the treatment
                                                                                                     Caspase-12 polypeptide useful for treating apoptotic conditions e.g. stroke, ischemia and proliferated disease e.g. cancer, lacks at least amino acids in a specific region of the native amino acid sequence -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a mouse Ice-4 protein sequence. The present sequence was used in a sequence homology comparison with the protein sequence of human Ice-ced 3 homolog (Ich-1) (AAB14253), murine interleukin-lbeta converting enzyme (mICE) (AAB14249), murine ICE2 (AAB14252) and C. elegans ced-3 (AAB14246). The coding sequence of the present sequence is a member of a family of genes involved in programmed cell death (apoptosis). Ich-1 may play an important role in both the positive and negative regulation of apoptosis. The Ich gene may be used in gene therapy in disorders characterised by cell death e.g. neural and muscular degenerative diseases, myocardial infarcation, stroke, virally

                                                                                  homolog (Ice-4), increasing Ice-4s enzymatic activity can promote the programmed cell death of cancer cells (pref. those overexpressing the bcl-2 oncogene), this can be used as the basis of a new cancer treatment. Alternatively by reducing Ice-4s enzymatic activity programmed cell death can be inhibited, this may be useful in the development of new cell lines which remain viable in culture
                                                                                                                                                                                                                                             Promoting or preventing programmed cell death in vertebrate cells - by inhibiting the activity of interleukin-1 beta converting

                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL/16-ABL/3611), expressed DNA sequences (ABL/16-ABL/36175) and the encoded proteins (ABB/7037-ABB/7072).
                      Arabidopsis thaliana protein fragment SEQ ID NO: 18943.
                                                                                                      AAG17789 standard; Protein;
                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes proteins and their fragments (I) encoded CC by chromosome 2 of the human malarial parasite, Plasmodium falciparum. CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). CC (I) and (II) are useful for the development of vaccines against CC (I) and (II) are useful for the development of vaccines against CC (I) and the infection (I) and polyclonal antisera or a monoclonal CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially when they are rifins or secreted or membrane proteins) CC (I) (especially end they are rifins or secreted or membrane proteins) CC complexity of the parasite biology, a process hampered by the CC complexity of the parasitic lifecycle, and provide new targets for CC resistance to insecticides have led to a resurgence of malaria in many CC parts of the world, and there is a pressing need for vaccines and mosquito CC parts. AAA70787 and AAA7087 and AAA818352 represent nucleotide CC and protein sequences given in the present invention, but which are not CC specifically mentioned within the specification.
                                                                                                                                                                                                                                                     AAB95086
                                                                                                                                                                                                                                                                          RESULT 15

                                                                                                                                                                                                                                                                                         The present invention describes primer sets for synthesising 5602 cc full-length cDNAs defined in the specification. Where a primer set cc comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of cc the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises as sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end cc golynucleotide which comprises a 5'-end cc golynucleotide comprises a 3'-end sequence complementary to a complementary to a complementary to a compount of the specification. The primer sets can be used in antisense therapy and compared the specification. The primers are useful for synthesising polynucleotides, can be used in antisense therapy and compared the compount of the specification and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers also useful for the compared the compared that the proteins encoded by the full-useful condition and sequence is generally of the proteins encoded by the full-useful condition and sequences and and condition of the cDNAs easily without any specialised methods. AAH03166 to AAH13628 and condition conditions are present buman amino acid sequences; and AAH13629 to AAH13632 conditions.

Conditions of the present invention.

Patent No. 6340740

GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
APPLICANT: Fernandez-Alnemri, Teresa
APPLICANT: Fernandez-Alnemri, Teresa
TITLE OF INVENTION: CASPASE-14, AN APOTOTIC PROTEASE, NUCLEIC ACID ENCODING
TITLE OF INVENTION: AND METHODS OF USE
TITLE FILE REFERENCE: 480140.43401
CURRENT APPLICATION NUMBER: US/09/187,789
CURRENT FILING DATE: 1998-11-06
NUMBER OF SEQ ID NOS: 78
SOFTWARE: Patentin Ver. 2.0

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                  Score
